# Contents

1 Introduction 1
   1.1 Generalized Method of Moments in Econometrics 1
   1.2 Population Moment Conditions and the Statistical Antecedents of GMM 5
   1.3 Five Examples of Moment Conditions in Economic Models 15
      1.3.1 Consumption-Based Asset Pricing Model 15
      1.3.2 Evaluation of Mutual Fund Performance 17
      1.3.3 Conditional Capital Asset Pricing Model 20
      1.3.4 Inventory Holdings by Firms 22
      1.3.5 Stochastic Volatility Models of Exchange Rates 24
   1.4 Review of Statistical Theory 26
      1.4.1 Properties of Random Sequences 27
      1.4.2 Stationary Time Series, the Weak Law of Large Numbers and the Central Limit Theorem 29
   1.5 Overview of Later Chapters 31

2 The Instrumental Variable Estimator in the Linear Regression Model 33
   2.1 The Population Moment Condition and Parameter Identification 34
   2.2 The Estimator and a Fundamental Decomposition 36
   2.3 Asymptotic Properties 39
   2.4 The Optimal Choice of Weighting Matrix 43
   2.5 Specification Error: Consequences and Detection 44
   2.6 Summary 47

3 GMM Estimation in Correctly Specified Models 49
   3.1 Population Moment Condition and Parameter Identification 50
   3.2 The Estimator and Numerical Optimization 57
   3.3 The Identifying and Overidentifying Restrictions 64
   3.4 Asymptotic Properties 66
      3.4.1 Consistency of the Parameter Estimator 67
      3.4.2 Asymptotic Normality of the Parameter Estimator 69
      3.4.3 Asymptotic Normality of the Estimated Sample Moment 73
   3.5 Long Run Covariance Matrix Estimation 74
3.5.1 Serially Uncorrelated Sequences
3.5.2 VARMA Processes
3.5.3 Heteroscedasticity and Autocorrelation Covariance Matrix Estimators
3.6 The Optimal Choice of Weighting Matrix
3.7 Transformations, Normalizations and the Continuous Updating GMM Estimator
3.8 GMM as a Unifying Principle of Estimation
3.8.1 Single Step Estimators
3.8.2 Sequential Estimators
3.9 Summary

4 GMM Estimation in Misspecified Models
4.1 Probability Limit of the First Step Estimator
4.2 Asymptotic Distribution Theory for the First Step Estimator
4.3 Long Run Covariance Matrix Estimation
4.4 The Two Step or Iterated GMM Estimator
4.4.1 Estimation with $W_T = \hat{S}_{SU}^{-1}$ or $W_T = \hat{S}_{SU,a}^{-1}$
4.4.2 Estimation with $W_T = \hat{S}_{HAC}^{-1}$ or $W_T = \hat{S}_{HAC,a}^{-1}$
4.4.2.1 Estimation with $W_T = \hat{S}_{HAC,b}^{-1}$
4.4.2.2 Estimation with $W_T = \hat{S}_{HAC}^{-1}$
4.5 The Estimated Sample Moment
4.6 Summary of Consequences of Misspecification for GMM Estimation

5 Hypothesis Testing
5.1 The Overidentifying Restrictions Test
5.1.1 The Statistic and its Asymptotic Distribution in Correctly Specified Models
5.1.2 Non-Local Misspecification
5.1.3 Local Misspecification
5.1.4 The Parallels Between Non-Local and Local Analysis
5.2 Testing Hypotheses about Subsets of $E[f(x, \theta_0)]$
5.2.1 Technical Details
5.3 Testing Hypotheses About the Parameter Vector
5.3.1 GMM Estimation Subject to Nonlinear Restrictions on $\theta_0$ and Other Technical Details
5.4 Testing Hypotheses About Structural Stability
5.4.1 Known Break Point Case
5.4.2 Unknown Break Point Case
5.4.2.1 Technical Details
5.4.3 Other Types of Structural Instability
5.5 Other Hypothesis Tests
5.5.1 Non-Nested Hypothesis Tests
5.5.2 Hausman Tests
6 Asymptotic Theory and Finite Sample Behaviour

6.1 The Impact of the Degree of Overidentification on the Asymptotic Behaviour of the Estimator
6.1.1 Finite Increase in the Degree of Overidentification
6.1.2 Redundant Moment Conditions
6.1.3 The Degree of Overidentification Increases with the Sample Size
6.2 Finite Sample Theory for Static Models
6.2.1 Exact Results for the IV Estimator in the Linear Simultaneous Equations Models
6.2.2 Higher Order Approximations
6.3 Simulation Evidence from Nonlinear Dynamic Models
6.4 Summary and Link to Following Chapters

7 Moment Selection in Theory and in Practice

7.1 Preliminaries
7.2 The Optimal Instrument
7.2.1 Static Models
7.2.2 Dynamic Models
7.2.3 Efficiency Comparison with Maximum Likelihood
7.3 Moment Selection in Practice
7.3.1 Selection Based on the Orthogonality Condition
7.3.2 Selection Based on the Relevance Condition
7.3.3 A Combined Strategy
7.3.4 Other Methods of Instrument Selection
7.4 Summary

8 Alternative Approximations to Finite Sample Behaviour

8.1 The Bootstrap
8.1.1 Background and Intuition
8.1.2 Nonlinear Dynamic Models
8.1.2.1 Generation of Bootstrap Sample When the Data are Dependent
8.1.2.2 Calculation of the GMM Estimator and Related Statistics in the Bootstrap Samples
8.1.2.3 Choosing the Number of Replications
8.1.2.4 Summary of Bootstrap Calculations
8.2 Inference in the Presence of Weak Identification
8.2.1 The Limiting Behaviour of the GMM Estimator
8.2.2 Inference in the Presence of Weak Identification
8.2.3 The Detection of Weak Identification
8.3 Inference When the Long Run Variance is Estimated by an HAC Estimator with $b_T = T$
8.4 Summary
9 Empirical Examples 312
  9.1 Mutual Fund Performance Evaluation 313
  9.2 Conditional Capital Asset Pricing Model 318
  9.3 Inventory Holdings by Firms 325
  9.4 Stochastic Volatility Model of Exchange Rates 334

10 Related Methods of Estimation 342
  10.1 Simulation Based Estimation 342
    10.1.1 Simulated Method of Moments 343
    10.1.2 Indirect Inference 347
  10.2 Empirical Likelihood 350

Appendix A Mixing Processes and Nonstationarity 354
  A.1 Mixing processes 354
  A.2 Nonstationarity 357
