# Contents

**Preface**

**General References**

1. The Disconnection Approach  
2. Basic Principles: Synths and Reagents: Synthesis of Aromatic Compounds  
3. Strategy I: The Order of Events  
4. One-Group C–X Disconnections  
5. Strategy II: Chemoselectivity  
6. Two-Group C–X Disconnections  
7. Strategy III: Reversal of Polarity, Cyclisations, Summary of Strategy  
8. Amine Synthesis  
10. One-Group C–C Disconnections I: Alcohols  
11. General Strategy A: Choosing a Disconnection  
12. Strategy V: Stereoselectivity A  
13. One-Group C–C Disconnections II: Carbonyl Compounds  
14. Strategy VI: Regioselectivity  
15. Alkene Synthesis  
17. Two-Group C–C Disconnections I: Diels–Alder Reactions  
18. Strategy VIII: Introduction to Carbonyl Condensations  
19. Two-Group C–C Disconnections II: 1,3-Difunctionalised Compounds  
20. Strategy IX: Control in Carbonyl Condensations  
21. Two-Group C–C Disconnections III: 1,5-Difunctionalised Compounds Conjugate Addition and Robinson Annelation  
23. Two-Group Disconnections IV: 1,2-Difunctionalised Compounds  
25. Two-Group Disconnections V: 1,4-Difunctionalised Compounds  
26. Strategy XII: Reconnection  
27. Two-Group C–C Disconnections VI: 1,6-diCarbonyl Compounds  
28. General Strategy B: Strategy of Carbonyl Disconnections  
30. Three-Membered Rings  
31. Strategy XIV: Rearrangements in Synthesis  
32. Four-Membered Rings: Photochemistry in Synthesis
33. Strategy XV: The Use of Ketenes in Synthesis 201
34. Five-Membered Rings 207
36. Six-Membered Rings 221
37. General Strategy C: Strategy of Ring Synthesis 227
38. Strategy XVII: Stereoselectivity B 235
39. Aromatic Heterocycles 245
40. General Strategy D: Advanced Strategy 255
