# Contents

**Preface**  
**List of Acronyms**  

## Part I  Collecting, Preparing and Checking the Data

1. **Measurement, Errors and Data for Consumer Research**  
   1.1 Measuring the world (of consumers): the problem of measurement  
   1.2 Measurement scales and latent dimensions  
   1.3 Two sample data-sets  
   1.4 Statistical software  
   Summing up  
   Exercises  
   Further readings and web-links  
   Hints for more advanced studies  
   Notes  

2. **Secondary Consumer Data**  
   2.1 Primary and secondary data  
   2.2 Secondary data sources  
   2.3 Household budget surveys  
   2.4 Household panels  
   2.5 Commercial and scan data  
   Summing up  
   Exercises  
   Further readings and web-links  
   Hints for more advanced studies  
   Notes  

3. **Primary Data Collection**  
   3.1 Primary data collection: surveys errors and the research design  
   3.2 Administration methods  
   3.3 Questionnaire  
   3.4 Four types of surveys  
   Summing up  
   Exercises  
   Further readings and web-links
4 Data Preparation and Descriptive Statistics
  4.1 Data preparation
  4.2 Data exploration
  4.3 Missing values and outliers detection
     Summing up
     Exercises
     Further readings and web-links
     Hints for more advanced studies
     Notes

Part II Sampling, Probability and Inference

5 Sampling
  5.1 To sample or not to sample
  5.2 Probability sampling
  5.3 Non-probability sampling
     Summing up
     Appendix
     Exercises
     Further readings and web-links
     Hints for more advanced studies
     Notes

6 Hypothesis Testing
  6.1 Confidence intervals and the principles of hypothesis testing
  6.2 Test on one mean
  6.3 Test on two means
  6.4 Qualitative variables and non-parametric tests
  6.5 Tests on proportions and variances
     Summing up
     Exercises
     Further readings and web-links
     Hints for more advanced studies
     Notes

7 Analysis of Variance
  7.1 Comparing more than two means: analysis of variance
  7.2 Further testing issues in one-way ANOVA
  7.3 Multi-way ANOVA, regression and the general linear model (GLM)
  7.4 Starting hints for more complex ANOVA designs
     Summing up
     Exercises
     Further readings and web-links
     Hints for more advanced studies
     Notes
Part III  Relationships Among Variables

8  Correlation and Regression
8.1  Covariance and correlation measures 173
8.2  Linear regression 179
8.3  Multiple regression 185
8.4  Stepwise regression 187
8.5  Extending the regression model 189
   Summing up 193
   Exercises 193
   Further readings and web-links 194
   Hints for more advanced studies 195
   Notes 195

9  Association, Log-linear Analysis and Canonical Correlation Analysis
9.1  Contingency tables and association statistics 196
9.2  Log-linear analysis 199
9.3  Canonical correlation analysis 208
   Summing up 214
   Exercises 215
   Further readings and web-links 216
   Hints for more advanced studies 216
   Notes 217

10  Factor Analysis and Principal Component Analysis 219
10.1 Principles and applications of data reduction techniques 219
10.2 Factor analysis 221
10.3 Principal component analysis 229
10.4 Theory into practice 235
   Summing up 244
   Exercises 245
   Further readings and web-links 246
   Hints for more advanced studies 246
   Notes 246

Part IV  Classification and Segmentation Techniques 247

11  Discriminant Analysis 248
11.1 Discriminant analysis and its application to consumer and marketing data 248
11.2 Running discriminant analysis 250
11.3 Multiple discriminant analysis 254
   Summing up 260
   Exercises 260
   Further readings and web-links 261
   Hints for more advanced studies 261
   Notes 262
## CONTENTS

### 12 Cluster Analysis
- 12.1 Cluster analysis and its application to consumer and marketing data 263
- 12.2 Steps in conducting cluster analysis 265
- 12.3 The application of cluster analysis in SAS and SPSS – empirical issues and solutions 271
  - Summing up 280
  - Exercises 280
  - Further readings and web-links 281
  - Hints for more advanced studies 281
  - Notes 282

### 13 Multidimensional Scaling
- 13.1 Preferences, perceptions and multidimensional scaling 283
- 13.2 Running multidimensional scaling 286
- 13.3 Multidimensional scaling and unfolding using SPSS and SAS 292
  - Summing up 297
  - Exercises 297
  - Further readings and web-links 298
  - Hints for more advanced studies 299
  - Notes 299

### 14 Correspondence Analysis
- 14.1 Principles and applications of correspondence analysis 300
- 14.2 Theory and techniques of correspondence analysis 303
- 14.3 Running correspondence analysis 305
  - Summing up 311
  - Exercises 312
  - Further readings and web-links 313
  - Hints for more advanced studies 313
  - Notes 313

## Part V Further Methods in Multivariate Analysis

### 15 Structural Equation Models
- 15.1 From exploration to confirmation: structural equation models 316
- 15.2 Structural equation modeling: key concepts and estimation 318
- 15.3 Theory at work: SEM and the Theory of Planned Behavior 322
  - Summing up 333
  - Exercises 333
  - Further readings and web-links 335
  - Hints for more advanced studies 335
  - Notes 336

### 16 Discrete Choice Models

337
16.3 Discrete choice models in SPSS 342
16.4 Choice modeling and conjoint analysis 347
   Summing up 349
   Exercises 350
   Further readings and web-links 351
   Hints for more advanced studies 351

17 The End (and Beyond) 352
17.1 Conclusions 353
17.2 Data mining 353
17.3 The Bayesian comeback 354
   Summing up 358
   Notes 358

Appendix Fundamentals of Matrix Algebra and Statistics 359
   A.1 Getting to know $x$ and $y$ 359
   A.2 First steps into statistical grounds 367
      Notes 374

Glossary 375
