CHAPTER 1  Tension and Compression

1.1 Internal Effects of Forces  1.2 Mechanical Properties of Materials  1.3 Statically Indeterminate Force Systems  1.4 Classification of Materials  1.5 Units

CHAPTER 2  Shear Stresses

2.1 Shear Force and Shear Stress  2.2 Deformations Due to Shear Stresses  2.3 Shear Strain

CHAPTER 3  Combined Stresses

3.1 Introduction  3.2 General Case of Plane Stress  3.3 Principal Stresses and Maximum Shearing Stress  3.4 Mohr's Circle

CHAPTER 4  Thin-Walled Pressure Vessels

4.1 Introduction  4.2 Cylindrical Pressure Vessels  4.3 Spherical Pressure Vessels

CHAPTER 5  Torsion

5.1 Introduction  5.2 Torsional Shearing Stress  5.3 Shearing Strain  5.4 Combined Torsion and Axial Loading

CHAPTER 6  Shearing Force and Bending Moment

6.1 Basics  6.2 Internal Forces and Moments in Beams  6.3 Shear and Moment Equations with Diagrams  6.4 Singularity Functions

CHAPTER 7  Stresses in Beams

7.1 Basics  7.2 Normal Stresses in Beams  7.3 Shearing Stresses in Beams  7.4 Combined Loading

CHAPTER 8  Deflection of Beams

8.1 Basics  8.2 Differential Equation of the Elastic Curve  8.3 Deflection by Integration  8.4 Deflections Using Singularity Functions  8.5 Deflections Using Superposition
CHAPTER 9  Statically Indeterminate Elastic Beams

9.1 Basics

CHAPTER 10 Columns

10.1 Basics  10.2 Critical Load of a Long Slender Column  10.3 Eccentrically Loaded Columns  10.4 Design Formulas for Columns Having Intermediate Slenderness Ratios

CHAPTER 11 Fatigue
