Plenary Presentations

3 Bubbles and flotation
   James A. Finch

5 Hydrodynamic characterisation of industrial flotation machines using radiotracers
   Juan B. Yianatos and Francisco Díaz

7 Innovation and energy efficiency in copper extraction
   John O. Marsden

CHAPTER 1
Comminution—crushing, grinding and HPGR

11 Real time, robust, full concentration particle size analysis using ultrasonic extinction
   Andrew Smith, Axel Pankewitz and Christian Behrens

21 Influence of feed particle size distribution on comminution effects in high-pressure comminution processes
   Daniel Saramak

29 Strategy of electric-pulse installations development for electrical disintegration of materials
   Anatoly Usov and Aleksander Potokin

37 Where to select grindability samples
   Jenny Chen, Alex Doll and Derek Barratt

45 Robust approach for online particle size estimation in a wet grinding plant
   Hugo Garcés H. and Daniel Sbábaro H.

55 Advanced control of crushing and autogenous grinding circuits through the use of image analysis
   Marco A.S. Martins, Marcelo M. Gontijo and André Nogueira
CHAPTER 2

Fundamentals of flotation

109 Organic depressant reagents effect on pyrite in copper minerals flotation
Pedro E. Sarquís, Adriana Moyano, Mercedes González and Vanesa Bazán

117 Applying positive matrix factorisation to distil key information about flotation rate constants
Gerson Sandoval-Zambrano, William J. Whiten, Gonzalo Montes-Atenas and Pentti Paatero

125 Effect of polyacrylic acid in restoring chalcopyrite and molybdenite flotation
Maria Sinche, Daniel Fornasiero, Massimiliano Zanin

135 Depression of pyrite in porphyry copper flotation
Massimiliano Zanin and Saeed Farrokhpay

145 The role of sampling time in determining the bubble loading in large-scale froth flotation cells
Gonzalo Montes-Atenas and William J. Whiten

153 Assessing uncertainties of flotation kinetics derived from measured operating variables
Gerson Sandoval-Zambrano and Gonzalo Montes-Atenas
Multivariate analysis of ToF-SIMS data as a tool for characterisation of complex copper ores
Yogesh Kalegowda, Igor Ametov and Sarah L. Harmer

Applying the Splitting Technique to determine floatability components of an ore sample
Javier Sierra-Villalobos and Gonzalo Montes-Ateinas

Application of multiple-time scale turbulence model to froth flotation stirred tanks
Javier Larondo, Gonzalo Montes-Ateinas, Matthew Brennan and Nirmal Weerasekara

Simulating stable orientations of orthorhombic particles in thin films and their effect on stability
Gareth Morris, Stephen J. Neethling and Jan J. Cilliers

The relationship between froth velocity and overflow froth height and the link to Peak Air Recovery
Kathryn Hadler and Jan J. Cilliers

Advances in flotation using positron emission particle tracking and 3D simulation
Jan J. Cilliers, Pablo R. Brito-Parada, Katie Cole, Barry J. Shean and Kathryn Hadler

Effect of bacteria on the flotation of chalcopyrite
Wenying Liu, Chris Moran and Sue Vink

An approach to characterise frother roles in flotation
Cesar O. Gomez, James A. Finch and Daniela Muñoz-Cartes

CHAPTER 3
Industrial applications of flotation

Recovery of cassiterite concentrate from minefield tailings using unconventional flotation reagents
John Ade Ajayi and Awe Olaniyi

New plant design for Cu and Mo recovery from Piuquenes tailings dam marginal resources
Eduardo Morin, Feiruz Barham and Gino Slanzi

Comparison of 160 m³ rougher cells using a new flotation mechanism design at Collahuasi concentrator
Juan B. Yianatos, Catalina Pino, Luis Vinnett, Francisco Díaz, Claudio Muñoz and Alejandro Yañez
CHAPTER 4

Process design, control, simulation and optimisation

295 Optimising arsenic-rejection flotation circuit—design and selection based on multiple objective evaluation
Marcelo M. Montenegro, Warren J. Bruckard, Edelmira D. Gálvez and Luis A. Cisternas

305 Scale-up rules in flotation cells — local vs average energy dissipation rate
Javier Larrondo, Gonzalo Montes-Atenas, Matthew Brennan and Nirmal Weerasekara

315 Improving energy and water specific consumption strategies—remote supervision and diagnostics
Osvaldo A. Bascur, Curt Hertler and Ron Kolz

327 Rougher flotation operation aided by industrial simulator
Luis G. Bergh and Juan B. Yianatos

335 Application of image analysis in flotation control
Marco A.S. Martins, Hugo M. Gontijo, Plínio C. Gianeli and Mônica G. Vieira

343 The use of advanced simulation software for the development of the Virtual Process Plant
Michael R. Nees and Thomas V. Camarano

353 Communion process optimisation through reliability and maintainability modelling and simulation
Alessio Arata, Esteban Heidke, Adolfo Arata and Fredy Kristjanpoller
CHAPTER 5
Tailings and water management

365 Unveiling the myth of high capacity thickeners
Fernando Betancourt and Fernando Concha

375 Improved dewaterability of clay mineral tailings
Jonas Addai-Mensah

385 Giant steps forward in the available scale of pressure filtration
Jason Palmer

395 Water supply in Peru and Chile — the challenges and the solutions
Doris Hiam-Galvez, Hu Fleming, Amin Ghobeity and Oscar Osores

CHAPTER 6
Other mineral processing technologies

411 Case study — the role of innovation and its application to the mining industry
Lincoyán Hernández, Arturo Herrera and Carlos Fernández

419 Beneficiation of pyrite-rich tailings from coal jig processing by aqueous elutriation
Alexandre H. Englert and Jorge Rubio

427 Dissolved air flotation as an alternative treatment for coal wastewater
Hudson J.B. Couto, Silvia C.A. França and Juliana da S. Santos

437 EDITORS

439 AUTHOR INDEX
