CHAPTER 1
Communion: Crushing, grinding, HPGR

26  Theoretical studies on new spheroidal tetrahedron shaped grinding media for ball mills  Lachezar Tsotsorkov, Petar Bodurov and Todor Penchev
28  Principles for optimal operating point selection in cone crushers  Pekka Itävu, Matti Vilkko and Antti Jaatinen
30  Pilot HPGF test programs and parameters for design  Frank van der Meer, Lea Quince and Ricardo Fernández
32  Case study of dry HPGF grinding and classification in ore processing  Frank van der Meer and Siegfried Strasser
34  Bond WI as a parameter for the evaluation of ore variability in current grinding plant design practice  Claudio Schneider, Douglas Mazzinghy and Vladimir Alves
36  SAGDesign™ - using open technology for mill design and performance assessments  John Starkey and Kingsley Larbi
38  Dynamic flow and level simulation of a mobile crushing plant for process control design  Pasi Airikka
40  Feed control of a mobile rock crushing plant  Pasi Airikka and Petri Aro
42  Predicting effect of media size in ball milling using the mechanistic grinding model  Rodrigo Carvalho and Luis Tavares
44  Motor selection for primary gyratory crushers - unique loads require a unique motor design  Dusty Jacobson, Bart Sauer and Joe Peeler
CHAPTER 2
Flotation

48 Flotation studies of a spodumene pegmatite ore
   Paulo Viana, Cláudio Pinto, Rízia Papini and Armando Araujo

50 Quantifying sphalerite activation with Pb(II): A contact
   angle study
   Gloria Dávila-Pulido, Alejandro Uribe-Salas and
   Fabiola Nava-Alonso

52 The use of optical refractometer to measure the
   concentration of starch solutions in reverse flotation of
   iron ore
   Aline Lacerda, Érica Reis and Alysson Borges

54 Turbidity reduction in oil-in-water emulsions
   Elenice Silva, André Silva and Jader Marins

56 Hybrid Energy Flotation™ technology - optimisation of
   fine and coarse particle recovery
   Dariusz Lelinski, Devan
   Govender, Bartosz Dabrowski and Frank Traczyk

58 Increase silver recovery, improving the particle size
   at a rate of 8,000 ton/day by Six Sigma methodology
   Luis Carrillo, Sergio Flores, Jaime Bravo, María Quintero
   and Ulises Vargas

60 Laboratory flotation tests... who cares?
   Christopher Greet, Jessica Kinal and Grant Small

62 Experimental design to evaluate a reagent system for a
   nickel ore flotation
   Jean Louzada, Ronald Hacha, Mônica
   Cassola and Marisa Monte

64 Lead recovery from metallurgical slag by flotation
   Paulo Braga, João Sampaio, Carlos Baltar, Arnolfo Coelho
   and João Nunes

66 Metallurgical performance of the new flotation plant at
   Teck CDA
   Juan Yianatos, Luis Bergh, Luis Vinnett, Francisco
   Díaz and Luis Torres

68 Saponified vegetable oils from Amazon as hematite
   collectors
   Denilson Costa, Lucinewton Moura
   and Antônio Peres

70 The use of column flotation to recover nickel minerals
   from low grade ores
   Silvia França and Hudson Couto

72 Improving Cu/Ni selectivity at the Vale Bessemer matte
   flotation circuit
   Massimiliano Zanin, William Skinner,
   Lindsay Rowland and Virginia Lawson
CHAPTER 3
Tailings and water management

86 The task of sizing thickeners, from testwork to industrial operation: Is larger the better option? › Felipe Bañados
88 Dewatering and filtration: How can surfactant improve it? › Wagner Silva, Mônica Cassola and Nilson Bartalini
90 Solid liquid separation interrelationship between thickeners and filtration equipment › Jason Palmer
92 Electroosmotic dewatering and consolidation of mineral waste tailings › Jonas Addai-Mensah
94 Increased water recovery through remote operations and automation › César Guzmán and Sebastián Rey

CHAPTER 4
Process design, simulation and optimisation

98 A hybrid method for the design of flotation circuits › Felipe Sepúlveda, Maritza Elorza, Luis Cisternas and Edelmira Gálvez
100 Using the Monte Carlo technique for mineral breakage simulation › André Silva, Elenice Silva, José Medeiros da Luz and Américo Bernardes
102  A new revision in Plitt's model for hydroclones simulation › André Silva, Elenice Silva and Jainer Matos
104  Graphite processing in Brazil › José Medeiros da Luz and Célio Ávila
106  Optimisation process with six sigma at Minera Fresnillo: Flotation › Victor Santana, Sergio Flores, Jaime Bravo, María Concepción Quintero and Ulises Vargas
108  Predicting the size distribution in the product and the power requirements of a pilot scale vertimill › Douglas Mazzinghy, Vladimir Alves, Claudio Schneider, Patricia Faria, Tatiane Alvarenga and Roberto Galéry
110  Characterisation for simulating flotation plants: Kinetic parameters by grade and size › Keila Gonçalves, Ronald Rojas, Marisa Monte and Claudio Schneider
112  Automatic control of a crushing plant: Common problems and their solutions › Antti Jaatinen and Pekka Itävuo
114  Simplified modelling of SAG systems based on phenomenological process - conceptual development › Miguel Becerra and Luis Magne
116  Simplified modelling of SAG systems based on phenomenological process - practical development › Miguel Becerra and Luis Magne
118  Analytical considerations and numerical simulations of counter current columnar flotation › Gerhard Holzinger, Stefan Pirker and Lilla Grossmann
120  A comparative analysis of grinding circuit design methodologies › Miguel Becerra and Peter Amelunxen
122  Concentrate grade improvement on the east pit hypogene ore at Kemess Mine › Michel Brissette and Eliab Roman
124  Dissolved copper recovery using thickened acid tailings › César Guzmán, Sebastián Rey and Claudia Garrido
126  Silver recovery from polymetallic flotation tailings › Pablo Duran and Verena Block
CHAPTER 5
Concentration plant management and operations

130 Recovery of gold and silver from a pyrite concentrate → Salvador Gómez and Pablo González

132 Accounting for in-process inventories in and around mineral and metal processing plants → Simon Gariépy, Luc Lachance, Donald Leroux and Frédéric Flament

134 Abatement of ions in fresh water taken from salt flats by using lime and its effect on flotation performance → Liliana Vásquez, Claudio Muñoz and Constantino Suazo

136 Progress and challenges in the area of mineral processing in Peñoles Group → Carlos Lara

138 Lean and Six Sigma tools applied to improve the management of the concentration operation → Pablo Duran and Wilber Churata

CHAPTER 6
Other mineral processing technologies

142 Modelling granular material flow in silos → Elenice Silva, André Silva and Sulamita Freitas

144 Using positron emission particle tracking to understand spiral concentrators → Kristian Waters, Raymond Langlois and Thomas Leadbeater

146 Moisture evolution in granular media under vibration → Felipe Milhomem and José Medeiros da Luz

149 Author’s index
