## PART I PRELIMINARIES

<b>1 Introduction and overview</b>	<b>3</b>
1.1 Relativity as a coordinate symmetry	5
1.1.1 From Newtonian relativity to ether	5
1.1.2 Einsteinian relativity	6
1.1.3 Coordinate symmetry transformations	7
1.1.4 New kinematics and dynamics	8
1.2 GR as a gravitational field theory	8
1.2.1 Einstein's motivations for the general theory	8
1.2.2 Geometry as gravity	10
1.2.3 Mathematical language of relativity	11
1.2.4 Observational evidence for GR	12
1.2.5 GR as the framework for cosmology	14
Review questions	14
<b>2 Special relativity: The basics</b>	<b>15</b>
2.1 Coordinate symmetries	15
2.1.1 Newtonian physics and Galilean symmetry	18
2.1.2 Electrodynamics and Lorentz symmetry	19
2.1.3 Velocity addition rule amended	21
2.2 The new kinematics	22
2.2.1 The basic postulates of special relativity	22
2.2.2 Relativity of equilocality and simultaneity	23
2.2.3 Time dilation and length contraction	26
2.3 Lorentz transformation	28
2.3.1 Physical meaning of various transformation terms	30
2.3.2 The relativistic invariant interval	31
2.3.3 Relativity is truly relative	32
2.3.4 Two paradoxes as illustrative SR examples	32
Review questions	35
Problems	36

## PART II · RELATIVITY: METRIC DESCRIPTION OF SPACETIME

<b>3</b>	<b>Special relativity: The geometric formulation</b>	<b>41</b>
3.1	Minkowski spacetime	42
3.1.1	Basis vectors, the metric and scalar product	43
3.1.2	The Minkowski metric and Lorentz transformation	45
3.2	Four-vectors for particle dynamics	47
3.2.1	The velocity 4-vector	47
3.2.2	Relativistic energy and momentum	48
3.3	The spacetime diagram	51
3.3.1	Basic features and invariant regions	52
3.3.2	Lorentz transformation in the spacetime diagram	53
3.4	The geometric formulation of SR: A summary	56
	Review questions	57
	Problems	58
<b>4</b>	<b>The principle of equivalence</b>	<b>61</b>
4.1	Newtonian gravitation potential—a review	61
4.2	EP introduced	63
4.2.1	Inertial mass vs. gravitational mass	63
4.2.2	EP and its significance	66
4.3	Implications of the strong EP	67
4.3.1	Gravitational redshift and time dilation	69
4.3.2	Light ray deflection calculated	74
4.3.3	Energy considerations of a gravitating light pulse	77
4.3.4	Einstein's inference of a curved spacetime	78
	Review questions	79
	Problems	79
<b>5</b>	<b>Metric description of a curved space</b>	<b>81</b>
5.1	Gaussian coordinates	82
5.2	Metric tensor	83
5.2.1	Geodesic as the shortest curve	86
5.2.2	Local Euclidean coordinates	88
5.3	Curvature	90
5.3.1	Gaussian curvature	91
5.3.2	Curvature measures the deviation from Euclidean relations	92
5.3.3	Spaces with constant curvature	94
	Review questions	98
	Problems	98
<b>6</b>	<b>GR as a geometric theory of gravity – I</b>	<b>100</b>
6.1	Geometry as gravity	100
6.1.1	EP physics and a warped spacetime	102
6.1.2	Curved spacetime as a gravitational field	103

6.2 Geodesic equation as GR equation of motion	105
6.2.1 The geodesic equation recalled	105
6.2.2 The Newtonian limit	107
6.3 The curvature of spacetime	109
6.3.1 Tidal force as the curvature of spacetime	110
6.3.2 The GR field equation described	113
Review questions	115
Problems	116
<b>7 Spherically symmetric spacetime – GR tests</b>	<b>117</b>
7.1 Description of Schwarzschild spacetime	118
7.1.1 Properties of a spherically symmetric metric tensor	118
7.1.2 The Schwarzschild geometry and the embedding diagram	121
7.2 Gravitational lensing	124
7.2.1 Light ray deflection: GR vs. EP	124
7.2.2 The lens equation	125
7.3 Geodesics in Schwarzschild spacetime	129
7.3.1 Precession of Mercury's perihelion	130
7.3.2 The Shapiro time delay of a light signal	135
Review questions	138
Problems	139
<b>8 Black holes</b>	<b>141</b>
8.1 Nonrotating black holes	142
8.1.1 Time measurements around a black hole	143
8.1.2 Eddington–Finkelstein coordinates: Black holes and white holes	145
8.1.3 Kruskal coordinates and the wormhole	151
8.2 Orbits and accretion disks around a black hole	155
8.2.1 Effective potential of the Schwarzschild spacetime	156
8.2.2 The binding energy of a particle around a black hole	157
8.3 Physical reality of black holes	158
8.3.1 The long road to the acceptance of the black hole's reality	158
8.3.2 Observational evidence of black holes	159
8.4 Appendix A: Rotating source of gravity	161
8.4.1 Properties of an axially symmetric metric tensor	161
8.4.2 Kerr geometry and the Penrose process	164
8.4.3 Beyond the Schwarzschild and Kerr black holes	170
8.5 Appendix B: Black holes and quantum physics	171
8.5.1 The Planck scale	171
8.5.2 Hawking radiation	172
8.5.3 Black hole thermodynamics	173
8.5.4 Black holes and quantum gravity	174
Review questions	175
Problems	176

## PART III COSMOLOGY

<b>9 The homogeneous and isotropic universe</b>	<b>181</b>
9.1 The cosmos observed	182
9.1.1 Matter distribution on the cosmic distance scale	182
9.1.2 Cosmological redshift: Hubble's law	184
9.1.3 Age of the universe	186
9.2 Mass density of the universe	188
9.2.1 Luminous matter and the baryonic density	189
9.2.2 Dark matter and the total mass density	190
9.3 The cosmological principle	194
9.4 The Robertson–Walker spacetime	195
9.4.1 The metric in the comoving coordinate system	195
9.4.2 Distances in the RW geometry	197
Review questions	202
Problems	203
<b>10 The expanding universe and thermal relics</b>	<b>205</b>
10.1 Friedmann equations	206
10.1.1 The GR field equations for cosmology	206
10.1.2 The quasi-Newtonian interpretation	208
10.2 Time evolution of model universes	212
10.3 Big bang cosmology	215
10.3.1 Scale-dependence of radiation's temperature	215
10.3.2 Different thermal equilibrium stages	217
10.4 Primordial nucleosynthesis	220
10.5 Photon decoupling and the CMB	223
10.5.1 The universe became transparent to photons	224
10.5.2 The discovery of CMB radiation	225
10.5.3 Photons, neutrinos and the radiation–matter equality time	226
10.5.4 CMB temperature fluctuation	230
Review questions	234
Problems	235
<b>11 Inflation and the accelerating universe</b>	<b>237</b>
11.1 The cosmological constant	238
11.1.1 Vacuum energy as source of gravitational repulsion	240
11.1.2 Einstein's static universe	241
11.2 The inflationary epoch	243
11.2.1 Initial conditions for the FLRW cosmology	244
11.2.2 The inflation scenario	246
11.2.3 Inflation and the conditions it left behind	248
11.3 CMB anisotropy and evidence for a flat universe	251
11.3.1 Three regions of the angular power spectrum	251
11.3.2 The primary peak and spatial geometry of the universe	254

11.4	The accelerating universe in the present epoch	256
11.4.1	Distant supernovae and the 1998 discovery	257
11.4.2	Transition from deceleration to acceleration	261
11.4.3	Dark energy: Further evidence and the mystery of its origin	264
11.5	The concordant picture	265
11.6	Appendix C: False vacuum and hidden symmetry	268
11.7	Appendix D: Quantum vacuum energy as the cosmological constant	271
	Review questions	274
	Problems	274

## PART IV RELATIVITY: FULL TENSOR FORMULATION

<b>12</b>	<b>Tensors in special relativity</b>	<b>279</b>
12.1	General coordinate systems	280
12.1.1	Contravariant and covariant components	281
12.1.2	Coordinate transformations	282
12.1.3	Position and del operators in Minkowski spacetime	284
12.2	Manifestly covariant formalism for electromagnetism	286
12.2.1	The electromagnetic field tensor	286
12.2.2	Electric charge conservation	290
12.3	Energy–momentum tensors	291
	Review questions	296
	Problems	296
<b>13</b>	<b>Tensors in general relativity</b>	<b>298</b>
13.1	Derivatives in a curved space	299
13.1.1	General coordinate transformations	299
13.1.2	Covariant differentiation	302
13.1.3	Christoffel symbols and the metric tensor	304
13.2	Parallel transport	307
13.2.1	Component changes under parallel transport	307
13.2.2	The geodesic as the straightest possible curve	308
13.3	Riemannian curvature tensor	309
13.3.1	The curvature tensor in an $n$ -dimensional space	311
13.3.2	Symmetries and contractions of the curvature tensor	313
	Review questions	315
	Problems	316
<b>14</b>	<b>GR as a geometric theory of gravity – II</b>	<b>318</b>
14.1	The principle of general covariance	319
14.1.1	The minimal substitution rule	319
14.1.2	Geodesic equation from SR equation of motion	320
14.2	Einstein field equation	321
14.2.1	Finding the relativistic gravitational field equation	321
14.2.2	Newtonian limit of the Einstein equation	323

14.3	The Schwarzschild exterior solution	325
14.4	The Einstein equation for cosmology	330
14.4.1	Solution for a homogeneous and isotropic 3D space	330
14.4.2	Einstein equation with a cosmological constant term	333
	Review questions	334
	Problems	335
<b>15</b>	<b>Linearized theory and gravitational waves</b>	<b>337</b>
15.1	Linearized theory of a metric field	338
15.1.1	The coordinate change called a gauge transformation	339
15.1.2	The wave equation in the Lorentz gauge	340
15.2	Plane waves and the polarization tensor	341
15.3	Detection of gravitational waves	343
15.3.1	Effect of gravitational waves on test particles	343
15.3.2	Gravitational wave interferometers	344
15.4	Emission of gravitational waves	346
15.4.1	Energy flux in linearized gravitational waves	347
15.4.2	Energy loss due to gravitational radiation emission	350
15.4.3	Hulse–Taylor binary pulsar	352
	Review questions	355
	Problems	356
 <b>PART V ENDNOTES</b>		
	<b>Answer keys to review questions</b>	<b>361</b>
	<b>Solutions to selected problems</b>	<b>372</b>
	<b>Glossary of symbols and acronyms</b>	<b>415</b>
	<b>References and bibliography</b>	<b>419</b>
	<b>Physical constants</b>	<b>425</b>
	<b>Index</b>	<b>427</b>
