PART I. LANDSCAPES AND REGIONS

1 Foundations

Mosaics and the patch–corridor–matrix model	3
Spatial scale	7
Natural process and human activity	14
Ecology of landscapes	19
Ecology of regions	22
Historical development of the field	28
Research methods	29
Conservation, planning, and other fields	36
Appendix: Glossary of common terms	38

PART II. PATCHES

2 Patch size and number

Patch dynamics: origin and persistence	44
Size effect on ecosystems	45
Size effect on biodiversity	54
Genetics in a patch	66
Minimum viable populations	68
Number of large patches	72
Appendix A. Ecosystem/community structure and function	75
Appendix B. Population ecology	78
Appendix C. Equations for species richness	80

3 Boundaries and edges

Types and abruptness	82
Edge development and controls	87
Functions of boundaries	95
Interactions between adjacent ecosystems	101
Width and curvilinearity	104
Moving boundaries	109

4 Patch shape

Common and uncommon shapes	114
Causes	120

CONTENTS

Shape attributes and ecological flows	124
How to measure shape	133
Moving patches	138
Appendix: Equations for measuring patch shape	141

PART III. CORRIDORS

5 Corridor attributes, roads, and powerlines

Internal and external structure	146
Five corridor functions	147
Width and connectivity	153
Changing corridors	157
Linear boundaries, corridors, and troughs	158
Road corridors	159
Trails and powerlines	172
Appendix: Experience with wildlife underpasses and tunnels	176

6 Windbreaks, hedgerows, and woodland corridors

Structural richness	178
Windbreaks and wind	180
Effects on microclimate, soil, snow, and plants	187
Hedgerows as habitats	195
Woodland corridors as wildlife conduits	198
Appendix: Equations for wind and erosion	207

7 Stream and river corridors

Corridor types	209
Key processes	216
Water quality and dissolved substances	228
Fish and aquatic habitats	232
Terrestrial animals and plants	236
Corridor width and connectivity	243
Appendix: Equations for water and erosion	252

8 Networks and the matrix

Network development and structure	254
Dendritic networks	262
Rectilinear networks and wavy nets	265
Functional roles of networks	269
Networks in action	272
Matrix structure	277
Matrix dynamics	279
Appendix: Network equations	282

PART IV. MOSAICS AND FLOWS

9 Mosaic patterns

Ecosystems in a cluster	286
Configuration usage and change	294
Mosaics reflecting geology and culture	300
The third dimension	302
Types of landscape and region	306

CONTENTS

Habitat arrangements and strategic points	310
Measuring mosaics	317
Appendix: Equations for measuring a mosaic	319
10 Wind and water flows in mosaics	
A global framework	323
Energy interconnecting mosaic elements	327
Materials and the giant conveyor belt	337
Flows in rough terrain	345
Disturbances in mosaics	351
Spatial pattern and disturbance spread	359
11 Species movement in mosaics	
Movement, mosaic, and model characteristics	365
Metapopulation dynamics	372
Gene flow	383
Movement among non-adjacent elements	386
Exotics and invaders	393
Livestock	398
PART V. CHANGING MOSAICS	
12 Land transformation and fragmentation	
Spatial processes in land transformation	406
Habitat fragmentation	412
Land change patterns	415
Modeling mosaic sequences	423
Toward an ecologically optimum land transformation	426
Reforestation and other patterns	432
13 Land planning and management	
Aggregate-with-outliers principle	436
Planning	440
Principles in a generic plan	449
Forest, dry area, and agriculture	456
Planning a suburb	459
Ecological design of house lots	469
Management	474
14 Creating sustainable environments	
Concepts of sustainability	481
Time and space	486
Human dimensions	492
Assays	497
Adaptability and stability	502
Learning from history	506
Regional ecology revisited	512
Making a landscape or region sustainable	514
<i>References and author index</i>	525
<i>Index</i>	605
