	<i>Contributor contact details</i>	viii
1	Why green composites?	1
	C. BAILLIE, Queen's University, Canada	
1.1	Introduction	1
1.2	An environmental footprint and life cycle assessment	1
1.3	Drivers for change	3
1.4	The structure of this book: a life cycle approach	5
2	Designing for composites: traditional and future views	9
	C. ROSE, University of Brighton, UK	
2.1	Introduction: design thinking	9
2.2	The three principles of development and the value system	11
2.3	The big challenge: the future of material consumption, utilisation and innovation	14
2.4	The use of composite materials through the ages: design, form and structure	20
	Sources of further information	22
	References	22
3	Life cycle assessment	23
	R. MURPHY, Imperial College London, UK	
3.1	Introduction	23
3.2	Life cycle assessment: methodology	24
3.3	LCAs of composite materials	35
3.4	Future trends: making use of LCA	43
3.5	Conclusions	46
	Sources of further information	46
	Acknowledgements	46
	References	47

iv	Contents	
4	Natural fibre sources	49
	T. NISHINO, Kobe University, Japan	
4.1	Introduction	49
4.2	The microstructure of natural plant fibres	49
4.3	The crystal structure of celluloses	54
4.4	The crystal modulus of natural fibres	56
4.5	The mechanical properties of cellulose microfibrils and macrofibrils	65
4.6	Natural fibre/sustainable polymer composites	68
4.7	Future trends	74
	References	76
5	Alternative fibre sources: paper and wood fibres as reinforcement	81
	P. PELTOLA, Tampere University of Technology, Finland	
5.1	Introduction and definitions	81
5.2	Wood fibres: structure, properties, making pulp and paper fibres	83
5.3	Recycling of paper	87
5.4	Wood and plastic composites and the theory of fibre reinforcement	90
5.5	Composites made of wood or wood fibre and plastics	92
	Acknowledgements	98
	References	98
6	Alternative solutions: recyclable synthetic fibre-thermoplastic composites	100
	R. A. SHANKS, RMIT University, Australia	
6.1	Introduction and definitions	100
6.2	Green composites and the structure and function of composites	101
6.3	Natural material sources: reconstitution of thermoplastic polymers and the effect of water	104
6.4	Synthetic recyclable composites	105
6.5	Processing innovations and mineral-filled composites	108
6.6	Properties of single polymer fibre-matrix composites	114
6.7	Future trends	119
	Sources of further information and advice	120
	Acknowledgements	120
	References	121

7	Natural polymer sources	123
	D. PLACKETT, Risø National Laboratory, Denmark and A. VÁZQUEZ, Universidad Nacional de Mar del Plata, Argentina	
7.1	Introduction: biocomposites and biodegradable polymers	123
7.2	Polyactides: polylactic acid (PLA) synthesis, properties, biodegradation, processing and applications	124
7.3	Polyhydroxyalkanoates: polyhydroxyalkanoate (PHA) synthesis, properties, biodegradation, processing and applications	128
7.4	Starch-based polymers: properties, biodegradation, processing and applications	132
7.5	Bio-based composites: mechanical properties, processing, characterisation, modification, water absorption, biodegradation and reinforcement	135
7.6	Future trends	147
	Sources of further information	148
	References	149
8	Optimising the properties of green composites	154
	S. H. AZIZ and M. P. ANSELL, University of Bath, UK	
8.1	Introduction	154
8.2	Thermosetting matrices versus thermoplastic matrices: a comparison	155
8.3	Selecting natural fibres for composites: stress transfer and physical characteristics	161
8.4	Case study: natural fibre composites with thermosetting resin matrices	164
8.5	Mechanical properties of composites as a function of design	165
8.6	Dynamic mechanical thermal analysis (DMTA) of long fibre composites	173
8.7	Environmental stability of natural fibre composites	176
8.8	Discussion and conclusions	177
	Sources of further information and advice	178
	Acknowledgements	178
	References	178
9	Green fibre thermoplastic composites	181
	M. SAIN and S. PANTHAPULAKKAL, University of Toronto, Canada	
9.1	Introduction: biofibre production	181
9.2	Green fibres for composite production	183

vi	Contents	
9.3	Thermoplastics for natural fibre composites	187
9.4	High performance fibres: thermal, chemical and mechanical treatments	189
9.5	Processing of natural fibre-filled composites	192
9.6	The performance and durability of natural fibres	197
9.7	Environmental benefits of using natural fibre-reinforced thermoplastics	201
9.8	Future trends	202
	References	203
10	Clean production	207
	N. TUCKER, University of Warwick, UK	
10.1	Introduction: clean processing	207
10.2	Energy saving in the manufacture and production of composites	210
10.3	Limiting the environmental impact of processing	215
10.4	The use of additives	222
10.5	End-of-life disposal strategies	226
10.6	Future trends	230
	References	231
11	Applications	233
	M. HUGHES, University of Wales, UK	
11.1	Introduction and definitions	233
11.2	Historical applications of green composites	235
11.3	Contemporary applications of green composites	237
11.4	Future trends	244
11.5	Conclusions	247
	Sources of further information and advice	248
	References	249
12	Re-use, recycling and degradation of composites	252
	A. HODZIC, James Cook University, Australia	
12.1	Introduction	252
12.2	Recycling of polymers and composites	254
12.3	Recycling of thermoplastic composites	255
12.4	Recycling of thermosetting composites	257
12.5	Degradation of polymers: UV light and biodegradation	260
12.6	Recycling of composites in the automotive industry	263
12.7	Utilising green composites and incinerating polymers	264
12.8	Conclusions and future trends	267
	References	268

13	Reprocessing	272
	J. C. ARNOLD, Swansea University, UK	
13.1	Introduction	272
13.2	Management of waste plastics and composites	273
13.3	Methods of sorting and separating plastics and polymers	277
13.4	Methods of recycling plastics	283
13.5	Future trends	294
	Sources of further information	295
	References	296
