|--|-----|
| Preface | x |
| Acknowledgements | xii |
| 1 Introduction | 1 |
| 1.1 Key concepts | 4 |
| 2 Remote sensing basics | 6 |
| 2.1 Electromagnetic waves | 6 |
| 2.2 The electromagnetic spectrum | 8 |
| 2.3 Reflectance and radiance | 8 |
| 2.4 Atmospheric effects | 11 |
| 2.5 Multispectral feature recognition | 13 |
| 2.6 Resolution requirements | 14 |
| 2.7 Key concepts | 16 |
| 3 Remote sensors and systems | 18 |
| 3.1 Introduction | 18 |
| 3.2 Remote sensors | 19 |
| 3.2.1 Multispectral satellite sensors | 19 |
| 3.2.2 Digital aerial cameras | 20 |
| 3.2.3 Thermal infrared sensors | 22 |
| 3.2.4 Radar and microwave radiometers | 23 |
| 3.2.5 Laser profilers | 26 |
| 3.3 Remote sensing platforms | 26 |
| 3.3.1 Airborne platforms | 27 |
| 3.3.2 Medium-resolution satellites | 28 |
| 3.3.3 High-resolution satellites | 30 |
| 3.3.4 Global observation satellites | 32 |
| 3.4 The NASA Earth observing system | 33 |
| 3.5 Global Earth observation systems | 34 |
| 3.5.1 Global Climate Observing System | 34 |
| 3.5.2 Global Earth Observation System of Systems | 34 |
| 3.5.3 Integrated Ocean Observing System | 35 |
| 3.6 Existing image archives | 36 |
| 3.7 Key concepts | 38 |
| 4 Digital image analysis | 40 |
| 4.1 Image data format | 40 |
| 4.2 Image pre-processing | 41 |
| 4.3 Image enhancement and interpretation | 42 |

| | | |
|-------|---|-----|
| 4.4 | Image classification | 44 |
| 4.5 | Image band selection | 48 |
| 4.6 | Error assessment | 49 |
| 4.7 | Time-series analysis and change detection | 50 |
| 4.8 | Field sampling using GPS | 56 |
| 4.9 | Use of Geographic Information Systems | 58 |
| 4.10 | Key concepts | 62 |
| 5 | Monitoring changes in global vegetation cover | 63 |
| 5.1 | EM spectrum of vegetation | 63 |
| 5.2 | Vegetation indices | 64 |
| 5.3 | Biophysical properties and processes of vegetation | 68 |
| 5.4 | Classification systems | 71 |
| 5.5 | Global vegetation and land cover mapping programmes | 73 |
| 5.5.1 | NASA Pathfinder global monitoring project | 74 |
| 5.5.2 | International geosphere-biosphere program | 75 |
| 5.5.3 | Application of new satellites and radar | 76 |
| 5.6 | Remote sensing of vegetation as a monitor for global change | 77 |
| | CASE STUDY: Desertification in the African Sahel | 77 |
| | CASE STUDY: Deforestation of Amazonia | 80 |
| 5.7 | Remote sensing of wetlands change | 82 |
| 5.8 | Fire detection | 87 |
| 5.9 | Key concepts | 89 |
| 6 | Remote sensing of urban environments | 91 |
| 6.1 | Urbanization | 91 |
| 6.2 | Urban remote sensing | 93 |
| 6.2.1 | Three-dimensional urban model generation | 98 |
| 6.2.2 | Stereo imaging | 98 |
| 6.2.3 | LiDAR | 99 |
| 6.2.4 | Synthetic Aperture Radar (SAR) | 100 |
| 6.3 | Microwave sensing of subsidence | 104 |
| 6.4 | Textural metrics | 108 |
| 6.5 | Monitoring city growth | 111 |
| 6.6 | Assessing the ecology of cities | 113 |
| 6.7 | Urban climatology | 114 |
| 6.8 | Air quality and air pollution | 116 |
| 6.9 | Climate change as a threat to urbanization | 120 |
| 6.10 | Key concepts | 121 |
| 7 | Surface and ground water resources | 122 |
| 7.1 | Remote sensing of inland water quality | 124 |
| 7.2 | Remote sensing sediment load and pollution of inland waters | 126 |
| 7.3 | Remote sensing non-coastal flooding | 129 |
| 7.4 | Bathymetry of inland waters | 131 |
| 7.5 | Mapping watersheds at the regional scale | 132 |

| | | |
|--------|--|-----|
| 7.6 | Remote sensing of land surface moisture | 135 |
| 7.7 | Remote sensing of groundwater | 137 |
| 7.8 | Key concepts | 140 |
| 8 | Coral reefs, carbon and climate | 142 |
| 8.1 | Introduction | 142 |
| 8.2 | The status of the world's reefs | 145 |
| 8.3 | Remote sensing of coral reefs | 146 |
| 8.4 | Light, corals and water | 148 |
| 8.4.1 | Light and the water surface | 148 |
| 8.4.2 | Light and the water body | 152 |
| 8.4.3 | Reflectance models for optically shallow waters | 154 |
| 8.4.4 | Reflectance signatures of reef substrata | 156 |
| 8.5 | Passive optical sensing | 159 |
| 8.6 | Sensor-down versus reef-up sensing | 164 |
| 8.7 | Spectral unmixing | 165 |
| 8.8 | Image-derived bathymetry | 167 |
| 8.9 | LiDAR | 168 |
| 8.10 | Sonar | 170 |
| 8.11 | Sub-bottom acoustic profiling | 174 |
| 8.12 | Radar applications | 177 |
| 8.13 | Class assemblages and the minimum mapping unit | 178 |
| 8.14 | Change detection | 180 |
| 8.15 | Key concepts | 183 |
| 9 | Coastal impact of storm surges and sea level rise | 184 |
| 9.1 | Predicting and monitoring coastal flooding | 186 |
| 9.2 | Coastal currents and waves | 191 |
| 9.3 | Mapping beach topography | 193 |
| 9.4 | LiDAR bathymetry | 196 |
| | CASE STUDY: LiDAR application to modelling sea level rise at the Blackwater National Wildlife Refuge | 200 |
| 9.5 | Key concepts | 202 |
| 10 | Observing the oceans | 204 |
| 10.1 | Introduction | 204 |
| 10.2 | Ocean colour, chlorophyll and productivity | 205 |
| 10.3 | Hazardous algal blooms and other pollutants | 210 |
| 10.4 | Sea surface temperature | 213 |
| | CASE STUDY: Upwelling and El Niño | 217 |
| 10.5 | Ocean salinity | 220 |
| 10.6 | Physical ocean features | 223 |
| 10.6.1 | Sea surface elevation and ocean currents | 224 |
| 10.6.2 | Sea surface winds | 229 |
| 10.6.3 | Ocean waves | 231 |
| 10.6.4 | Oil slicks and other surface features | 232 |

| | | |
|--------|--|-----|
| 10.7 | Ocean observing systems | 236 |
| 10.8 | Marine GIS | 237 |
| 10.9 | Key concepts | 239 |
| 11 | Monitoring Earth's atmosphere | 241 |
| 11.1 | The status of Earth's atmosphere | 241 |
| 11.2 | Atmospheric remote sensing | 243 |
| 11.3 | The 'A-Train' satellite constellation | 244 |
| 11.3.1 | Dancing on the A-Train | 246 |
| 11.4 | Remote sensing atmospheric temperature | 246 |
| 11.5 | Atmospheric remote sensing of ozone | 249 |
| 11.6 | Atmospheric remote sensing of carbon dioxide | 252 |
| 11.7 | Remote sensing atmospheric dust | 258 |
| | CASE STUDY: Spaceborne monitoring of African dust events | 259 |
| 11.8 | Clouds | 262 |
| 11.9 | Forecasting Earth's atmosphere | 263 |
| 11.10 | Atmospheric models and reality | 263 |
| 11.11 | Hurricanes | 265 |
| | CASE STUDY: Hurricane Katrina | 267 |
| 11.12 | Key concepts | 270 |
| 12 | Observing the cryosphere | 272 |
| 12.1 | Introduction | 272 |
| 12.2 | The history and status of the polar ice sheets | 272 |
| 12.3 | Ice and sea level | 274 |
| 12.4 | Ice and climate | 275 |
| 12.5 | Present ice loss in context | 277 |
| 12.6 | Remote sensing of the Earth's ice sheets | 278 |
| 12.6.1 | Passive optical and thermal remote sensing | 278 |
| 12.6.2 | Passive microwave remote sensing | 279 |
| 12.6.3 | Active microwave remote sensing | 281 |
| 12.6.4 | Active optical remote sensing – ICESat | 284 |
| 12.7 | Ice sheet mass balance | 287 |
| | CASE STUDY: Disintegration of the Larsen and Wilkins ice shelves | 288 |
| 12.8 | Remote sensing permafrost | 290 |
| 12.9 | Key concepts | 294 |
| 13 | Effective communication of global change information using remote sensing | 296 |
| 13.1 | Global environmental change as an interdisciplinary issue | 297 |
| 13.2 | Effective communication through accessibility of data | 299 |

| | | |
|--------|--|-----|
| 14 | Looking ahead: future developments | 303 |
| 14.1 | Emerging technologies | 303 |
| 14.1.1 | Fusion in remote sensing | 303 |
| 14.1.2 | Hyper-spatial satellites | 304 |
| 14.1.3 | Hyperspectral hyper-spatial satellites | 306 |
| 14.2 | The near future | 307 |
| 14.3 | The more distant future | 310 |
| 14.4 | Advanced image analysis techniques | 310 |
| 14.5 | Looking ahead at a changing Earth | 311 |
| | References | 316 |
| | Index | 361 |
